ECONO-BINDER

PRODUCT DATA SHEET

ECONO-BINDER (EB): EB is specially formulated for effective dust control. In concentrate form, it is intended for dilution with water for applications. EB is typically applied in 4:1 dilution (80% water and 20% EB). In addition to suppressing the irritating effects of airborne dust it is effective in stabilizing aggregate materials, reducing soil erosion and protecting vegetation from blowing dust and sand.

ECONO-BINDER contains effective binding agent to hold fine particles together and prevent them from being dispersed into the air. It is also formulated with blend of wetting agents, emulsifiers and dispersants to allow for penetration of the binding agents into the particles. EB emulsifies with all types of water and is highly stable in diluted form.

ECONO-BINDER does not have asphalt or solvent. The binding agents are non-volatile; it is non-corrosive to metal. Because this product contains water, it is non-flammable and safe during use.

ECONO-BINDER is classified as “NON-HAZARDOUS”, “NON-TOXIC”, and “NON-CARCINOGENIC” according to FEDERAL guidelines. It is also NON-TOXIC to aquatic life.
